UI-M-ALO-abp-a-12-0-UI 3', mRNA sequence.
                                                                                                                                                                                                                                                     The sequence contained an oligo-dT track that was present in the oligonuclectide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to verify it as a clone from the non-normalized prefrontal cortex library CDNA Library Preparation:

M.B. Soares Lab Clone distribution: NIH BMAP cDNA clones will be made available by the means that is soon to be determined. When NIH determines the means for distribution of the BMAP cDNA clones, this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         On Feb 24, 1999 this sequence version replaced gi:4061710. * NOTE: This is a 'working draft' sequence. It currently
consists of 3 contigs. Gaps between the contlys
are represented as runs of N. The order of the pleces
are represented as runs of N. The order of the pleces
sis believed to be correct as given, however the sizes
of the gaps between them are based on estimates that have
provided by the submittor.

* This sequence will be replaced
by the finished sequence as soon as it is available and
the accession number will be preserved.

1 1161: contig of 1161 bp in length

Botrytis cinerea strain
                                                                                                                                                                                                                                                                                                                                                                                             The cDNA library to be analyzed within the framework of this project was created using a Botrytis cinerea strain which was grown under conditions of nitrogen deprivation, which is the normal situation for B. cinerea during its development on its host plant. The library was produced in an oriented direction, in the pBSII
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            nitrogen deprivation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cc regular administration of beta-agonists comprises: (a) identifying cC in a genomic nucleic acid sample from the individual first and cC second alleles of the beta 2-adrenergic receptor gene, and (b) cC classifying an individual as susceptible if first and second classifying an individual as susceptible if first and second cC receptor protein. Beta 2-adrenergic receptor gene alleles may be cidentified by any known method e.g. denaturing gel electrophoresis cor pcR amplification (see also v52615-17). Identification cc preferably comprises amplifying a portion of each allele which cc includes the sequence encoding residue 16, and optionally also comprises determining nucleotide sequences of these portions (e.g. by automated sequence analysis). The invention identifies a known polymorphism in the beta 2-adrenergic receptor gene as being linked constrained in the beta 2-adrenergic receptor gene as being linked constrained to fit the encoded protein can be either Arg or Gly, and clindividuals homozygous for Arg16 are more susceptible.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Matc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      diseases e.g. osteoporosis

Example 15; Page 75-76; 118pp; Japanese.

The present invention describes DNA which participates in the regulation of expression of PEBP2 alpha A gene. The DNA produces a regulator protein with the activity of promoting bone formation and can serve as a promoter for prevention and treatment of bone diseases including osteoporosis. The present sequence represents a polynucleotide sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (SUMU ) SUMITOMO PHARM CO LTD.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PT Canine beta 2 and beta 3 adrenergic receptors and coding sequences - PT useful for identifying specific ligands and (ant)agonists to develop specific treatments for obesity in dogs PS Claim 1; Page 45-46; 79pp; French.

CC This sequence represent the coding region of the canine beta 2-adrenergic CC receptor (RA-Ca-b2) gene. The sequence was isolated from a CDNA library CC constructed from polyA+ RNA purified from dog brown adipose tissue cells. CC The probe was a 600 bp fragment of the coding region of the human beta-3 CC adrenergic receptor covering the region from the initiation codon to CC transmembrane domain 5 (TM5). The full length insert was cloned into M13 CC or sequencing using primers v30491-v30510. The sequence can then be CC expressed e.g. in a mammalian cell, by subcloning into an expression CC vector such as pCDMA3. The beta-2 receptor can be used in comparative Structure-function studies, e.g. for differential screening of ligands CC specific for RA-Ca-b2 or RA-Ca-b3 (W44933).

                                                                                                     pr factor 0sf2 - useful for, e.g. treatment of osteogenic diseases, in vaccines and for diagnosis

PS Claim 5; Pages 185-187; 273pp; English.

CC This DNA encodes a native 0sf2/Cbfal polypeptide (an osteoblast specific factor-2 encoded by the CBFAl locus). Host cells containing a vector comprising a 0sf2/Cbfal nucleic acid are used for the recombinant cc comprising a 0sf2/Cbfal nucleic acid are used for the recombinant cc production of the protein. The 0sf2/Cbfal has osteoblast-specific transcriptional activity (particularly for treating osteogenic diseases, optionally when expressed from a gene therapy vector). Osf2/Cbfal is also used to raise antibodies, to screen for modulators of its activity; used in vaccines and to detect specific antibodies (for diagnosis of bacterial infections). The Osf2/Cbfal polynucleotides can be used to produce transgenic animals or pluripotent non-human animal cells, while their fragments are used to detect Osf2/Cbfal genes by hybridisation, or as antisense molecules or ribozymes for downregulation of gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               PS Claim 72; Pages 155-156; 273pp; English.

PS Claim 72; Pages 155-156; 273pp; English.

CC The invention relates to an Osf2/Cbfal polypeptide (an osteoblast CC specific factor-2 encoded by the CBFAl locus). Host cells containing a CC vector comprising a Osf2/Cbfal nucleic acid are used for the recombinant CC production of the protein. The Osf2/Cbfal has osteoblast-specific CC transcriptional activity (particularly for treating osteogenic diseases, CC optionally when expressed from a gene therapy vector). Osf2/Cbfal is also CC used to raise antibodies, to screen for modulators of its activity; used CC infections). The Osf2/Cbfal polynucleotides can be used to produce transgenic animals or pluripotent non-human animal cells, while their CC fragments are used to detect Osf2/Cbfal genes by hybridisation, or as antisense molecules or ribozymes for downregulation of gene expression. CC Osf2/Cbfal polynucleotides are used for specific curanscription of osteoblast-specific genes that have an OSE2 sequence CC element; to generate an immune response; in binding assays to detect OSE2 element; for purification of such elements and to induce differentiation of osteoblast progenitors for stimulating formation, growth, replacement compair of bone tissue. Antibodies, optionally, labelled, are used as immunessay reagents for detecting Osf2/Cbfal; in DNA-binding assays to detect OSE2 element; progenitors for stimulating formation, growth, replacement condensity other genes to which Osf2/Cbfal can bind; for affinity of detections of osf2/Cbfal and to one related genes. Also regulatory condensity other genes to which Osf2/Cbfal genes are used to genes, e.g. osteoblast-specific expression of homologous or heterologous condensity. The present sequence represents the nucleic acid sequence considered in the order of the order of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

Nucleic acid sequence of the Osf2 promoter and 5' UTR.
Nucleic acid sequence of the Osf2 promoter and 5' UTR.
Osf2/Cbfal; osteoblast specific factor-2; CBFAl locus; transcriptional;
osteogenic; gene therapy; modulator; bacterial infection; transgenic;
osteoblast; bone; osteocalcin; collagen; osteopontin; sialoprotein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       elements; for purification of such elements and to induce differentiation of osteoblast progenitors for stimulating formation, growth, replacement and repair of bone tissue. Antibodies, optionally, labelled, are used as immunoassay reagents for detecting Osf2/Cbfal; in DNA-binding assays to identify other genes to which Osf2/Cbfal and hind; for affinity purification of Osf2/Cbfal and to clone related genes. Also regulatory sequences (promoter and enhancer) from Osf2/Cbfal genes are used to provide osteoblast-specific expression of homologous or heterologous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New nucleic acid expressing the osteoblast-specific transcription factor Osf2 - useful for, e.g. treatment of osteogenic diseases, vaccines and for diagnosis claim 72; Pages 155-156; 273pp; English.
                    sialoprotein. The present sequence represents of the Osf2 promoter and 5' UTR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ducy P, Karsenty G; WPI; 99-059837/05.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ş
                                                                                                                                                                                                                promoting repair and attachment of cartilaginous tissue - using erg. new fusion polypeptide of link protein and cartilage matrix protein, partic. for treating damage caused by arthritis is Disclosure; Fig 5; 48pp; English.

The sequence shows the human cartilage link protein gene. The link protein can be used in conjunction with a cartilage matrix protein to promote binding of a complex of proteoglycan and hyaluronic acid to collagen. The protein can be used to treat cartilage in joints esp. after damage by arthritis (esp. osteoarthritis) or to promote cartilage matrix formation in vitro to provide materiall for restorative or cosmetic surgery. It also promotes attachment to prostheses, implants, tissue grafts, etc.

infection.

PT infection.

PS Claim 1; Page 1239-1244; 2084pp; English.

CC A computer readable medium has been developed which has recorded on it CC 982 nucleotide sequences isolated from the Enterococcus faccalis genome. CC 12938 to X13919 represent these nucleotide sequences which are primary CC nucleotide sequences, also known as contigs. The computer-based system CC can identify fragments of the Enterococcus faecalis genome with CC commercial importance. The products can be used to detect the presence CC of Enterococcus faecalis in samples. They can also be used for CC diagnosing Enterococcal infection in an animal and monitoring CC progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or CC another related organism, in vivo or in vitro. In particular the constant of the progression of the enterococcus faecalis nucleotide sequences another related organism, in vivo or in vitro. In particular the constant of the progression of the enterococcus faecalis nucleotide sequences another related organism, in vivo or in vitro. In particular the constant of the progression of the enterococcus faecalis nucleotide sequences and the progression of the enterococcus faecalis nucleotide sequences constant of the progression of the enterococcus faecalis nucleotide sequences constant of the progression of the enterococcus faecalis nucleotide sequences constant of the progression of the enterococcus faecalis nucleotide sequences constant of the progression of the enterococcus faecalis nucleotide sequences constant of the progression of the enterococcus faecalis nucleotide sequences constant of the progression of the enterococcus faecalis nucleotide sequences constant of the progression of the enterococcus faecalis nucleotide sequences constant of the progression of the enterococcus faecalis nucleotide sequences constant of the progression of the enterococcus faecalis nucleotide of the progression of the enterococcus faecalis nucleotide of the en

The sequence was deduced finserts of 6 clones obtd. from genomic libraries e.g. by PCR amplification (see also 745144-45) and use of partial clones to screen the library. The identilies of the gene products (see al w006513-19 and w00871) were detd. by examining carotenoid accumulation in E. coli hosts transformed with deleted variants the gene cluster. The isolated genes can be used in different combinations to produce carotenoids in transformed host cells. Sequence 8625 BP; 1458 A; 2898 C; 2964 G; 1295 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        animal feeds

claim 16; Fig 1; 77pp; English.

Claim 16; Fig 1; 77pp; English.

Identifying genes which cause improper chromosome segregation, screening for inhibitors of chromosome missegregation and procueus given in T87401 to T87426 can be used in the above methods. Given in T87401 to T87426 can be used in the above methods. It is not clear from the figure legend, the figure and the disclosure of the specification which sequence of Fig 1 and Fi is the And/AD3LP or the An3 sequence.

pr screening of familial Alzheimer's disease, cerebral disorders, etc. ps Claim 8; page 148-150; 178pp; English.

CC Taim 8; page 148-150; 178pp; English.

CC T40028 and T40029 represent the coding sequences for the human presenilin-2. CC T40029 results from alternate splicing of the genomic DNA sequence CC T40029 results from alternate splicing of the genomic DNA sequence. CC T40030 represents the coding sequence for wild type mouse ps-1. The CC presenilins are a family of highly conserved integral membrane proteins CC with a common structural motif, common alternate splicing patterns, and CC common mutational hot spot regions. Mutations in PS genes are implicated CC common mutational hot spot regions. Mutations in PS genes are implicated CC in familial Alzheimer's disease (AD) and possibly other diseases such as CC cerebral haemorrhage, schizophrenia, depression etc. so detection of CC cerebral haemorrhage, schizophrenia, depression etc. so detection of CC antisense sequences, antibodies selective for mutant forms of thee encoded proteins (such as W05736) and modulators of PS gene expression are useful ptentially useful for treatment of AD etc. Transgenic animals are useful CC affinity purification and in immunoassays.
